ENTERED ACCORDING TO ACT OF CONGRESS, IN THE YEAR 1897,

BY GEORGE W. FREEMAN,

IN THE OFFICE OF THE LIBRARIAN OF CONGRESS AT WASHINGTON, D. C.

## INTRODUCTORY AND EXPLANATORY.

A reliable Ready Reckoning Calendar is of great value in a prison where prisoners are allowed a specified number of days "Good Time." It is also of great value in determining the expiration of commercial paper.

I have endeavored to make this one not only accurate, but simple and easily understood. The Tables in it have been prepared with much care and labor and they differ from any heretofore published.

In 1893 I saw the necessity of a shorter and more accurate method of figuring "Short Time," and therefore prepared the manuscript for the "Ready Reckoning Calendar."

You will observe that each date is represented by two sets of figures,—the upper one being the day of the month, and the lower set of figures representing the consecutive number of days from January 1st, 1893.

### TO FIND THE SHORT TIME OF A CONVICT.

Deduct the number of days earned from the full term.

FOR EXAMPLE:—If a convict was sentenced on November 1st, 1893, for a term of two years, his long term would expire on November 1st, 1895, and if he should earn 120 days in two years, this deducted from the set of figures under the date November 1st, 1895, the remainder will be the date on which his sentence will expire.

November 1st, 1895 is the 1035th day, from the commencement of this calendar; if his "Long Term" expires on the 1035th day, and he earns 120 days, his "Short Term" would expire on the 1035th day, less 120 days, which would be the 915th day, which falls on Tuesday, July 4th, 1895.

EXAMPLE No. 2:—If a convict was sentenced on July 16th, 1893 for 25 years, his "Long Term" would expire on July 16th, 1918, which would fall on the 9326th day; if he earns 3156 days "Good Time" in 25 years, his short term would expire on the 9326th day, less 3156 days, which falls on November 24th, 1909.

### TO FIND THE DATE OF EXPIRATION OF A NOTE.

Add the number of days for which it is drawn to the figures under the date on which it is dated, and the date under which the result thus obtained corresponds is the date of expiration.

If a note was dated December 27th, 1896, and drawn for 93 days, add 93 to 1457 (the figures under December 27th, 1896) and the result will be 1550. The 1550th day, falls on Tuesday March 30th, 1897.

These tables are wholly original and have been carefully prepared.

Very Respectfully,

GEO. W. FREEMAN,

MARQUETTE, MICH.

# HISTORY OF A CALENDAR.

The phases or changes of the moon supplied a natural and very obvious mode of dividing and reckoning time, and hence the division into months of 29 or 30 days was, perhaps, the earliest and most universal.

But it would soon be observed that, for many purposes, the changes of the seasons were more serviceable as marks of division; and thus arose the division into years, determined by the motion of the sun.

It was soon, however, discovered that the year, or larger division, did not contain an exact number of smaller divisions or months, and that an accommodation was necessary; and several not very dissimilar expedients were employed for correcting the error that arose.

The ancient Egyptians had a year determined by the changes of the seasons, without reference to the changes of the moon and containing 365 days, divided into 12 months of 30 days each, with 5 supplementary days at the end of the year.

The Jewish year consisted, in the earliest periods, as it still does, of 12 lunar months, a 13th being from time to time introduced to accommodate it to the sun and seasons; this was also the case with the ancient Syrians, Macedonians, etc.

The Romans are said to have had originally a year of 10 months; but in the times of their kings, they adopted a lunar year of 365 days, divided into 12 months, with an occasional intercalary month.

Through the ignorance of the priests, who had charge of this matter, the utmost confusion gradually arose, which Julius Cæsar remedied 46 B. C., by the introduction of the Julian Calendar, according to which, the year has ordinarily 365 days, and every 4th year is a leap-year of 366 days, the length of the year being thus assumed as  $365\frac{1}{4}$  days, while it is in reality 365 days 5 hours 48 minutes and 50 seconds; or 11 minutes 10 seconds less.

Cæsar gave to the months the number of days which they still have. So comparatively perfect was the Julian style of reckoning time, that it prevailed generally among the Christian nations, and remained undisturbed till the renewed accumulation of the remaining error of 11 minutes or so had amounted, in 1582 years after the birth of Christ, to 10 complete days; the vernal equinox falling on the 11th instead of the 21st of March, as it did at the time of the Council of Nicæ 325 years after the birth of Christ,

This shifting of days had caused great disturbance, by unfixing the times of the celebration of Easter, and hence of all other morable feasts.

And accordingly, Pope Gregory XII, after deep study and calculation, ordained that 10 days should be deducted from the year 1582, by calling what, according to the old calendar, would have been reckoned the 5th of October, the 15th of October, 1582; and in order that the displacement might not recur, it was further ordained that every hundreth year (1800, 1900, 2100, etc.) should not be counted a leap-year, excepting every 4th hundreth, beginning with 2000.

In this way the difference between the civil and natural year will not amount to a day in 5000 years.

FREEMAN'S

READY RECKONING CALENDAR.
